

Connected Health doesn't have to be complicated. Let us show you why.

Design, optimize and implement.

Our Program Design & Consulting team can collaborate with you to define requirements and map out a plan that successfully scales to reach your ROI goals. With Trapollo, you'll know exactly how your plan will work — so you're not wasting significant time, money and resources.

Practical experience — Our strong roots in Remote Patient Monitoring (RPM) have given us significant practical experience. As we've done with many clients across the spectrum of healthcare, we will work to launch, sustain and scale a successful Connected Health program for you.

Program design — Our program management team works side by side with you to develop a blueprint for optimal workflows and communication. We make our operations work with yours.

Integration — We provide synergistic solutions that seamlessly integrate with your existing systems and processes to meet your program requirements and evolve with your needs.

Optimization & implementation — We are relentless at testing and optimizing to make sure every element of your program is in place to work as planned. This stems from laying the right groundwork from the start.

It's not all about the technology — it's about setting the foundation with people and processes. Our step-by-step approach is designed to take the complexity out of building and piloting a successful Connected Health program.

Our goal is to equip your teams with the blueprint for designing, deploying and scaling your Connected Health program to work with you now and well into the future.

Trapollo is proof that a patient-first approach to Connected Health makes it more human. More kind. Let us show you how.
